

Legend

Fire Environment (FEN) 4 levels

Minimal	- The Overall Fire Environment suggests a very low risk for Large fires (less than 1% chance)
Normal	- The Overall Fire Environment suggests a <u>normal</u> risk for large fires (1 - 4% chance)
Elevated	- The Overall Fire Environment suggests a moderately high risk for large fires (5 - 19% chance)
High Risk	The risk for large fire(s) is very high (≥ 20%) Triggers: 1. ⚡ (Significant Lightning) 2. BEN (Critical Burn Environment)

The assessment of the overall fire environment considers multiple factors including weather, lightning amount and fuel dryness. Large Fire probabilities are derived objectively via statistical methods. **High Risk** levels (≥ 20% probability of a large fire) are almost always due to significant lightning as burning conditions alone rarely result in a large fire probability much above about 10%.

Pacific Northwest 7 Day Significant Fire Potential

NW12								

Fire Potential: Lightning over central and northeastern Oregon (PSAs NW06 and NW11) will likely result in some starts on Sunday but not enough to significantly challenge initial attack capability. Otherwise, potential for large fires will remain at minimal levels for the time being. Late next week a major warming trend will boost fire danger over much of the region. When lightning returns it looks as if it will pose a significant threat for large fires beginning over southern Oregon by next weekend.

Preparedness Level:

Northwest: 2

National: 2
